HTML & CSS Web Projects Report

Portfolio Website • Gym Website • College Fest Website

Student	Hussain
Course / Branch	B.Tech CSE – Core
Institution	NRI University
Report Date	24 October 2026

1. Introduction

This report presents three beginner-level web development projects created using basic HTML and CSS. The projects demonstrate how headings, text, sections, links, forms, colours, backgrounds, and simple page layouts can be combined to build useful websites.

2. Objectives

• Practice structuring webpages with HTML elements.

• Apply CSS colours, typography, spacing, and alignment.

• Organize information into clear sections for different audiences.

• Create simple website layouts for a personal profile, a gym, and a college festival.

3. Project One: Personal Portfolio Website

Purpose: To present a student's profile and key information in a simple, organized webpage.

Main features

• Profile heading and student introduction.

• Education section showing B.Tech CSE at NRI University.

• Skills section listing HTML, CSS, Python, and Java.

• Hobbies, projects, and contact email sections.

• Light-blue background, blue section headings, and centered text.

Screenshot

The page works as a basic online profile and demonstrates a consistent visual structure.

4. Project Two: PowerFit Gym Website

Purpose: To provide visitors with a quick overview of a gym's programmes, facilities, schedule, and membership plans.

Main features

• Workout programmes: strength training, cardio, and yoga.

• Trainer information and gym facilities.

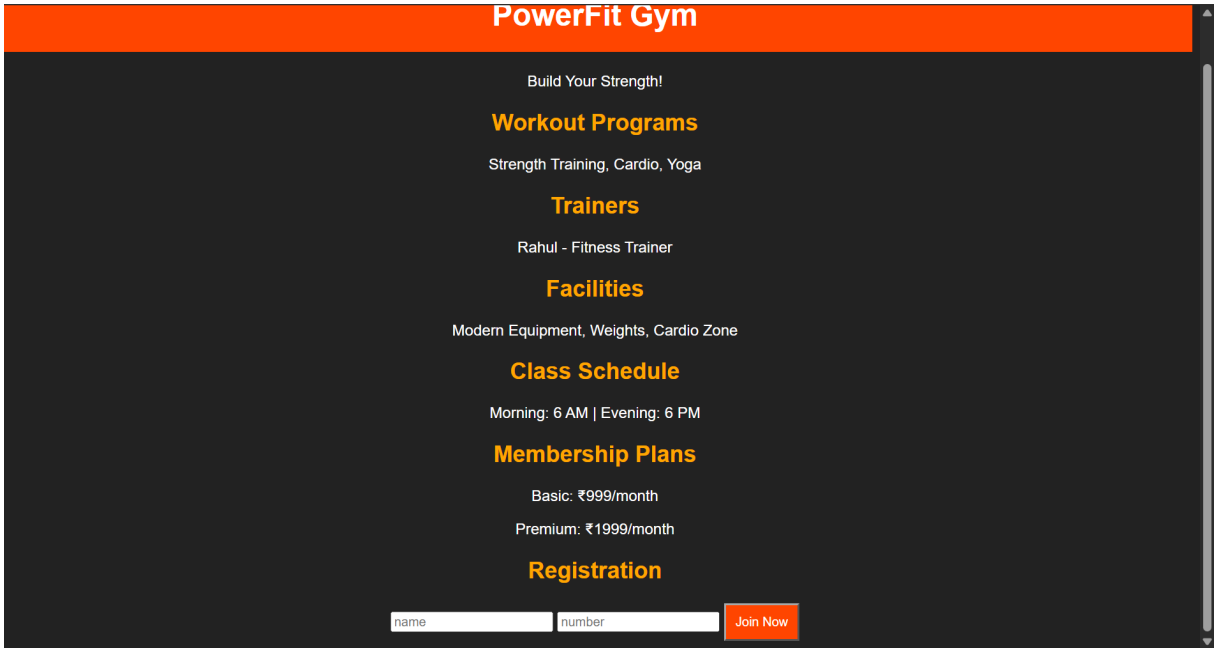

• Morning and evening class schedule.

• Basic and premium membership prices.

• Registration fields for name and phone number, with a Join Now button.

• Dark background with orange headings and a bright header.

Screenshot

The page presents gym services and membership information in clearly separated sections.

5. Project Three: College Fest Website

Purpose: To display college festival events and provide essential information to students.

Main features

• Navigation links for Events and Register.

• Technical events such as coding and robotics.

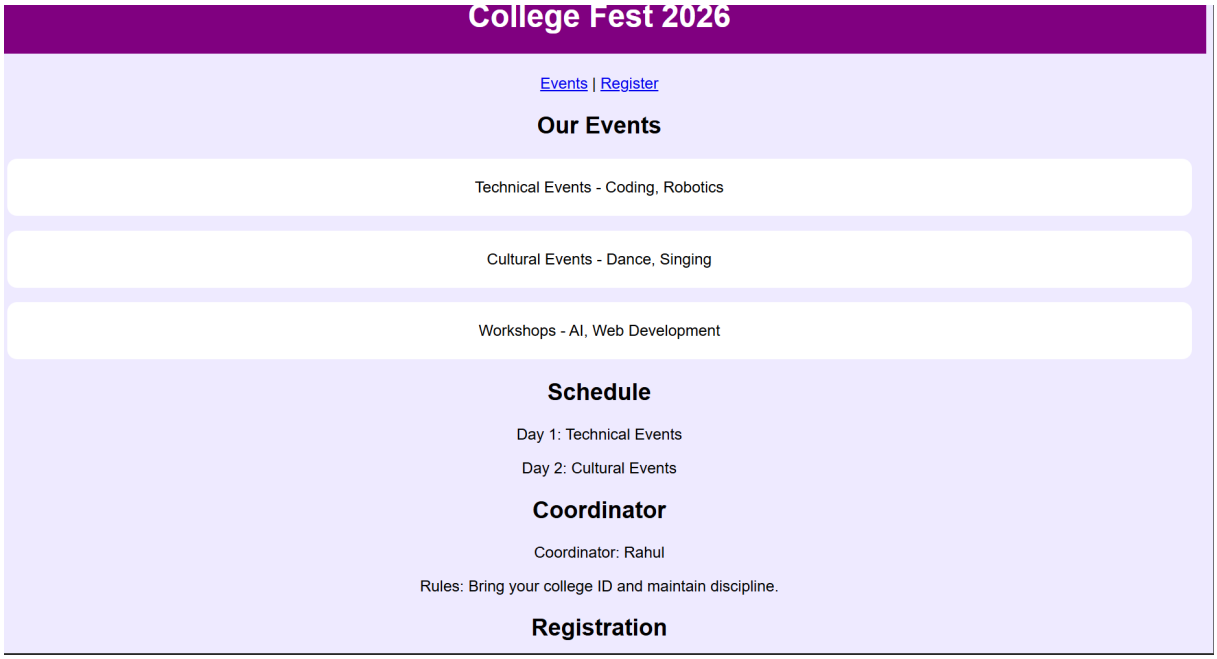

• Cultural events such as dance and singing.

• Workshops covering AI and web development.

• Two-day schedule, coordinator details, and event rules.

• Registration section and event cards with a light-purple background.

Screenshot

The page organizes festival information so students can quickly review event categories and schedules.

6. Conclusion

These three projects provide practical experience with foundational HTML and CSS. The portfolio website organizes personal information, the gym website presents services and membership options, and the college fest website communicates event details. Together, they demonstrate basic page structure, visual styling, and the use of forms and navigation links. Future improvements could include responsive layouts, form validation, accessible labels, and interactive features using JavaScript.

7. Tools and Technologies

HTML: Used to structure page content such as headings, paragraphs, links, and forms.
CSS: Used to style backgrounds, text colours, alignment, spacing, and page appearance.
